- **Web:** <http://tweetssentiment.com/>
- **Twitter:** <http://twitter.com/TweetsSentiment>

1.5 Where to find me?

- My nick: **asanzdiego**
- AboutMe: <http://about.me/asanzdiego>
 - GitHub: <http://github.com/asanzdiego/>
 - Twitter: <http://twitter.com/asanzdiego>
 - Blog: <http://asanzdiego.blogspot.com.es>
 - LinkedIn: <http://www.linkedin.com/in/asanzdiego>

1.6 Licence

- **This work is licensed under a:**
 - Creative Commons Attribution 3.0
- **The program source code are licensed under a:**
 - GPL 3.0

2 Instalation and how to use

2.1 Dependencies

- [Pandoc](#) (needs to be installed)
- [Phantom.js](#) (needs to be installed)
- [Reveal.js](#) (included)

2.2 Creation

- First **copy the doc folder and rename it as you like**. This is not necessary but helps you organize your documents.
- **Create the md files** that you want to generate. The md files are **Markdown** files which are nothing more than plain text files with extension md, and a lightweight markup (we should know it but it is very simple).
- Once created the md files, we can **generate html, html-slides y pdf-beamer with a script**.

2.3 Build

- To **convert all md files of all the folders** go to the root folder and execute:

```
./build.sh
```

- To **convert all md files of one folder** go to the root folder and execute:

```
./build.sh [folder_name]
```
